Thailand Digital Government Readiness Survey Methodology and Development

Survey procedures consist of 3 main parts

Define a target group

Target group consisted of 1,926 government agencies which can be classified into 3 levels as follows:

1. 315 Departmental agencies or equivalent
2. 2 Local Administrative Organizations (LAOs):
Bangkok and Pattaya
3. 1,609 Provincial level under the Department level

Design survey methodology

- The survey was primarily conducted online, however, the survey will be prepared in a paper form for agencies that were not ready or had a problem in responding to online survey.
- There was a verification by using website's verification methodology and **there were more intensive data and document verification, compared with 2019.**

Develop survey

- Developing and Improving **framework for Thailand Digital Government Readiness Survey 2020**
- **Developing and Improving survey by designing questions more thoroughly** to be consistent with the new assessment framework
- **Developing a digital government development readiness model** as a tool to compare the potential among agencies
- Modifying weight for scoring calculation
- Determining points of survey along with the methodology of collecting evidence

A target group can be classified into 3 levels

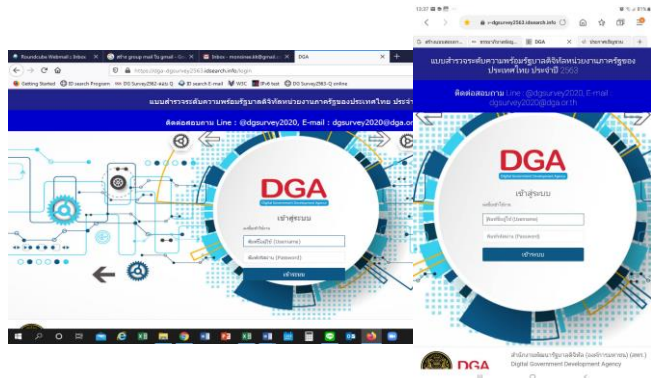

Define a target group

Target group consisted of 1,926 government agencies which can be classified into 3 levels as follows:

1. 315 Departmental agencies or equivalent
2. 2 Local Administrative Organizations (LAOs):
Bangkok and Pattaya
3. 1,609 Provincial level under the Department level

Set a target group for survey		
Target group	No. of agencies	Amount of responded agencies
 <p>Departmental level</p> <ul style="list-style-type: none"> • Government agencies / State enterprises / Public organizations / Independent organizations • Covering all ministries / equivalent 	315 agencies	At least 284 agencies (90%)
 <p>Local Administrative Organizations (LAOs) Bangkok and Pattaya</p>	2 agencies	100%
 <p>Provincial level (under the Department level)</p>	1,609 agencies <ul style="list-style-type: none"> • 76 agencies additional from 2019 	At least 1,287 agencies (80%) Surveyed at least 80% of each province

Surveys were mainly done through online channels which were validated before analyzing the final results.

- 1) The survey displayed were designed for the difference of screen size of the respondents' device.
- 2) Respondents were able to complete the survey via Login with Username and Password of each agency.

Design survey methodology

- The survey was primarily conducted online, however, the survey will be prepared in a paper form for agencies that were not ready or had a problem in responding to online survey.
- In addition to website verification, **data and evidence from respondents were more intensively verified, compared with 2019.**

- 1) Check the accuracy, completeness and clarity of the data provided by the agency
- 2) Check the rationality of the data provided by the agency
- 3) Contact the coordinator of the responding agency to inquire and correct information

Survey procedures consist of 3 main parts

Design survey methodology

- The survey was primarily conducted online, however, the survey will be prepared in a paper form for agencies that were not ready or had a problem in responding to online survey.
- There was a verification by using website's verification methodology and **there were more intensive data and document verification, compared with 2019.**

Develop survey

- Developing and Improving **framework for Thailand Digital Government Readiness Survey 2020**
- **Developing and Improving survey by designing questions more thoroughly** to be consistent with the new assessment framework
- **Developing a digital government development readiness model** as a tool to compare the potential among agencies
- Modifying weight for scoring calculation
- Determining points of survey along with the methodology of collecting evidence

Survey 2020 was designed to in accordance with the survey framework and maturity model.

1 Thailand Digital Government Readiness Survey Framework

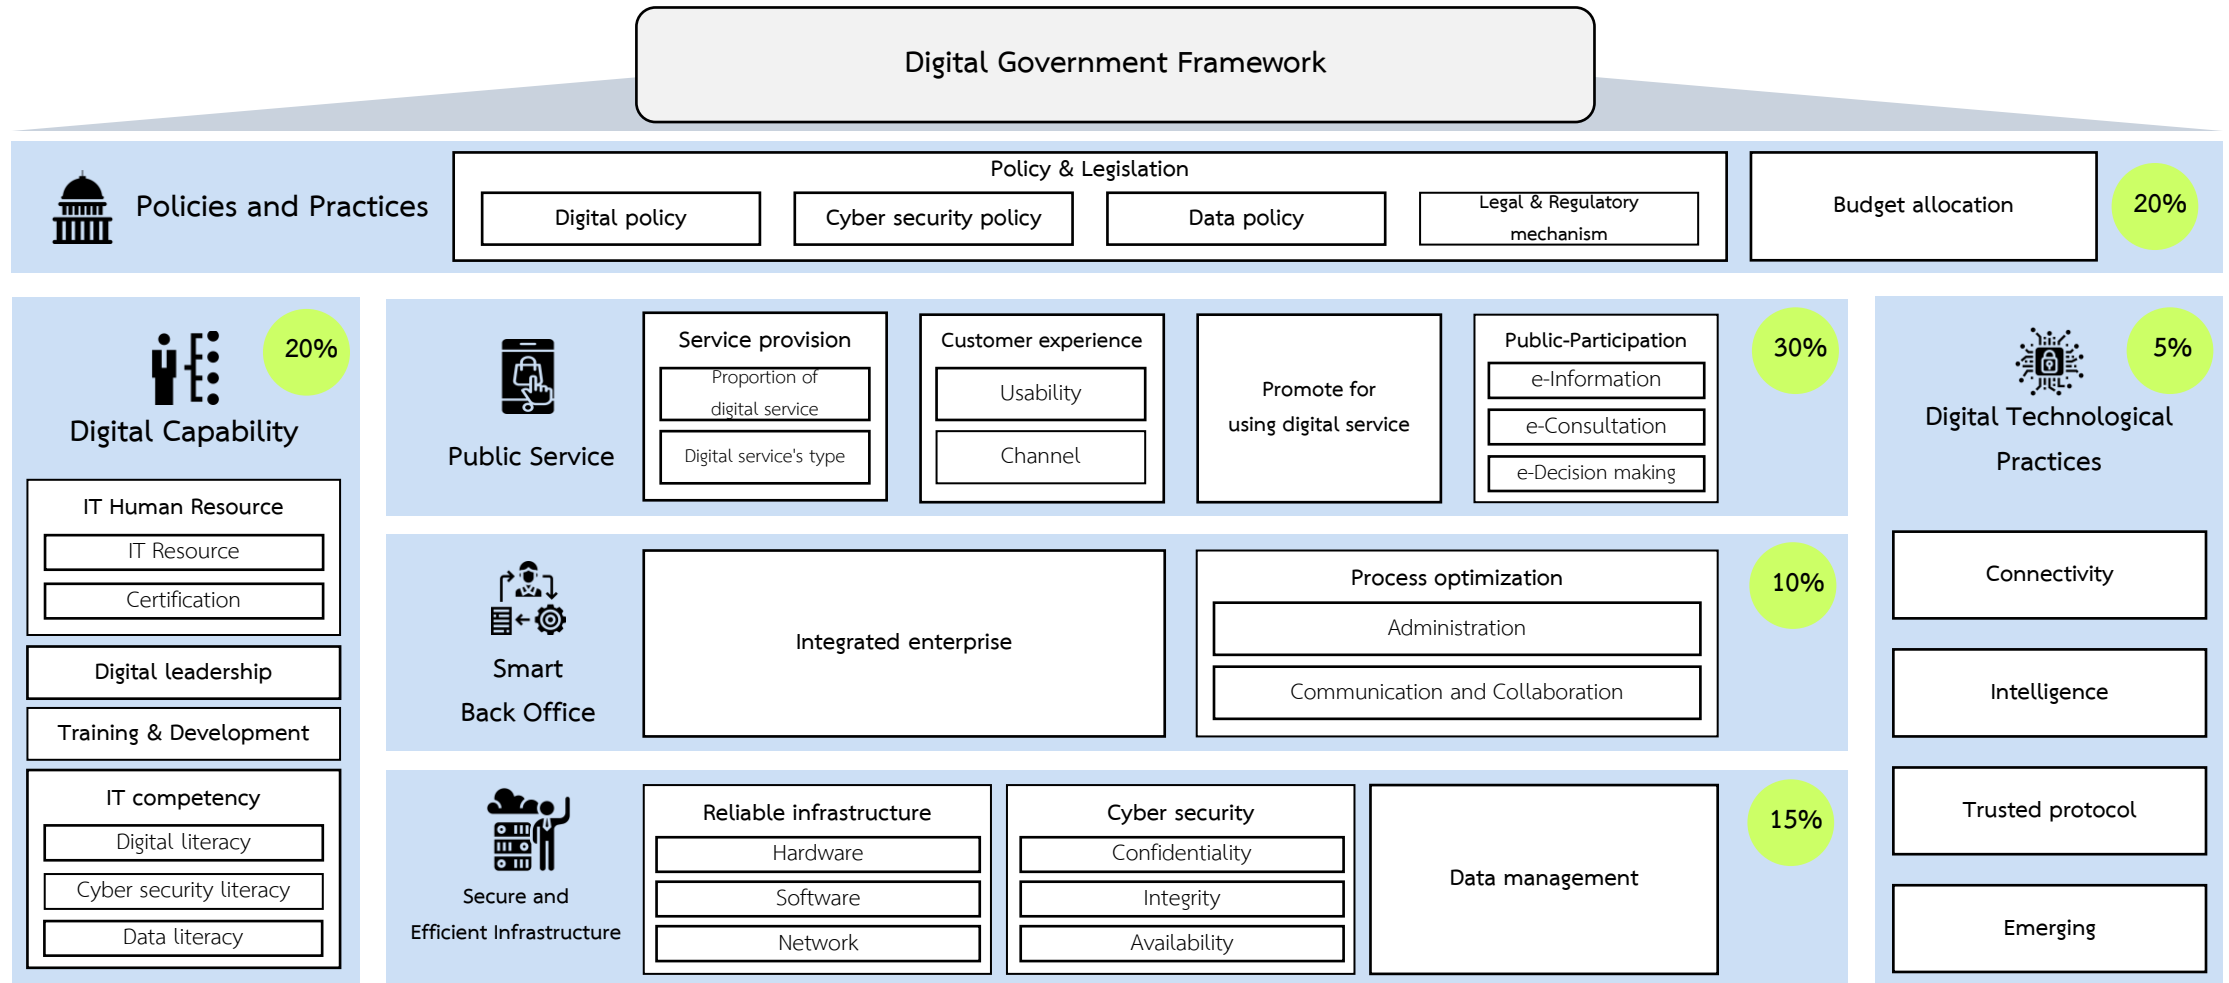

- Determined the Pillars according to a survey framework as in 2019
- Designed according to context of Thai government agencies and digital government development framework
- Defined and grouped survey topics based on global research
- Adjusted the details of each Pillar to clarify the survey topics

2 Maturity model

Factors	Levels	Initial (Government)	Developing (Digital)	Defined (Data-driven)	Integrated (Data-based)	Optimizing (Data-led)
Policy and Practices		Compliance (ปฏิบัติตามกฎหมายและระเบียบ)	Transparency (โปร่งใสและเปิดเผยข้อมูล)	Constituent value (สร้างคุณค่าแก่ผู้เกี่ยวข้อง)	Insight-driven transformation (การเปลี่ยนแปลงที่ขับเคลื่อนด้วยข้อมูลเชิงลึก)	Sustainability (ความยั่งยืนของข้อมูลและการดำเนินงาน)
Digital Capability		Inefficient (ไม่มีประสิทธิภาพ)	Elementary (ขั้นพื้นฐาน)	Intermediate (ขั้นกลาง)	Effective (มีประสิทธิภาพ)	Digital savvy (มีความรู้และทักษะด้านดิจิทัล)
Public Service		Reactive (ตอบสนอง)	Intermediate (ขั้นกลาง)	Proactive (เชิงรุก)	Empowered (ได้รับการเสริมพลัง)	Proactive (เชิงรุก)
Smart Back Office		Basic (ขั้นพื้นฐาน)	Co-ordinated (ประสานงาน)	Digital (ดิจิทัล)	Strategic (เชิงกลยุทธ์)	Transformational (การเปลี่ยนแปลง)
Secure & Efficient Infrastructure		Obsolete (ล้าสมัย)	Fundamental (ขั้นพื้นฐาน)	Cross-channel (ข้ามช่องทาง)	Integrated (บูรณาการ)	Digitalized (ดิจิทัล)
Digital Technology Practices		Outdated (ล้าสมัย)	Standard (มาตรฐาน)	Digitalize-tech (เทคโนโลยีดิจิทัล)	Leading-tech (เทคโนโลยีล้ำหน้า)	Future-tech (เทคโนโลยีอนาคต)

- Developed a measurement guideline based on the concept of Gartner’s Digital government maturity model
- Designed based on Pillars from the Digital Government Readiness Survey framework to achieve consistency in measurement and recommendation development

Framework for Thailand Digital Government Readiness Survey 2020

Adding sub-Pillars that were not covered in 2019 survey and grouped some sub-Pillar into new topics

Maturity model

In the 2020 Readiness Survey, a Maturity Model is developed to measure Thailand Digital Government Readiness. The Maturity Model will be another complementary tools to assist government agencies of Thailand to understand their digital readiness, providing guidance on how to transform in order to align with Thailand national development plan and to meet a world class standard.

The Maturity Model is designed to adopt Pillars and sub-Pillars to measure the level of digital readiness which is aligned with the digital government development plan and focus on the essence of digital government aspect. Each Pillar are scored by 5 levels as following:

Pillars	Sub-Pillars
Policies and Practices	Digital policy / Data policy
Digital Capability	Digital leadership / Training & Development / IT Competency
Public Services	Service Provision / Customer experience / Public-participation
Smart Back Office	Integrated enterprise / Process optimization
Secure and Efficient Infrastructure	Reliable infrastructure / Cyber security / Data Management
Digital Technological Practices	Connectivity / Intelligence / Trusted Protocol

Maturity model will be measured from 6 Pillars according to the survey framework which can be divided into 5 levels.

	Level 1	Level 2	Level 3	Level 4	Level 5
Factors	Initial (E-Government)	Developing (Open)	Defined (Data-centric)	Integrated (Fully Digital)	Optimizing (Smart)
Policies and Practices	Compliance	Transparency	Constituent value	Insight-driven transformation	Sustainability
Digital Capability	Inefficient	Elementary	Intermediate	Effective	Digital savvy
Public Service	Reactive	Intermediated	Proactive	Embedded	Predictive
Smart Back Office	Basic	Co-ordinated	Digital	Strategic	Transformational
Secure & Efficient Infrastructure	Obsolete	Fundamental	Cross-channel	Integrated	Digitized
Digital Technological Practices	Outdated	Standard	Disruptive-tech	Leading-tech	Future-tech

Overview of Thailand Digital Government Readiness Survey Result

Survey 2020 consists of respondents more than 96% of total government agencies in Thailand

From total sent out of 1,926 agencies, **1,850** agencies responded.

Departmental agencies or equal

From total sent out of 315 agencies, **292** agencies responded.

Local Administrative Organizations

From total sent out of 2 agencies, **2** agencies responded.

Provincial agencies

From total sent out of 1,609 agencies, **1,556** agencies responded.

Overview result from maturity model

292
Departmental
agencies

1,556
Provincial
agencies

- Overall, Departmental agencies are more readily than Provincial agencies.
 - Departmental agencies have an average of maturity at level 3 which is greater than Provincial agency almost 4 times.
 - Some of departmental agencies have a maturity at level 4.

Result from maturity model by Pillars

Agencies were classified into four groups according to survey score

Agency classification aims to classify agencies into a group based on their survey scores by min-max normalization. Each agency can relatively compare their normalized scores (*Z-score*) across periods. The normalized scores can be calculated as below formula.

$$z_i = \frac{x_i - \min(x)}{\max(x) - \min(x)}$$

z_i = คะแนนปกติของหน่วยงาน

x_i = คะแนนของหน่วยงาน

$\min(x)$ = คะแนนต่ำสุดภายในกลุ่มตัวอย่างทั้งหมด

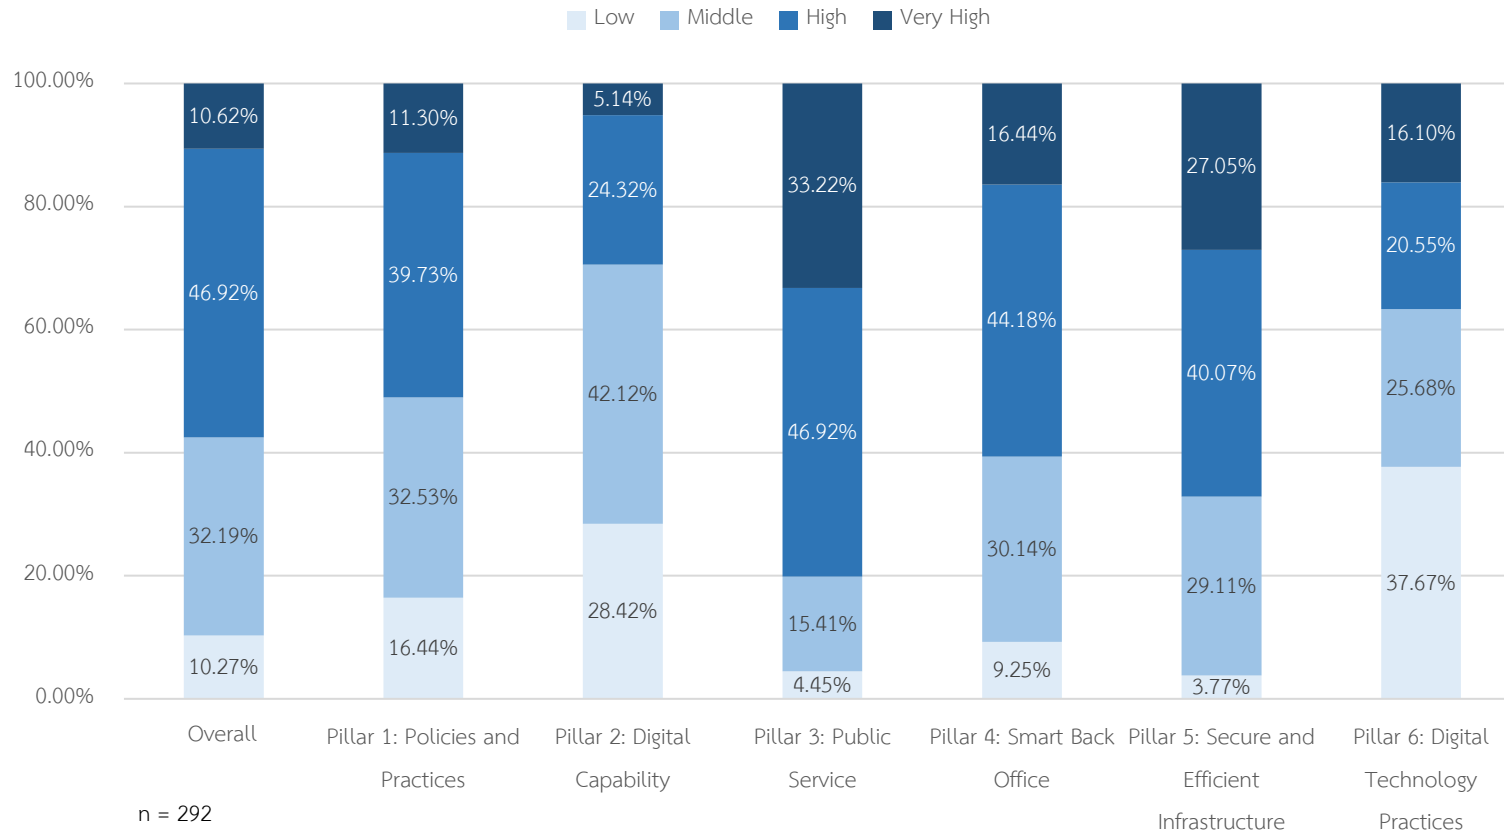

$\max(x)$ = คะแนนสูงสุดภายในกลุ่มตัวอย่างทั้งหมด

Agencies were grouped by a ranged of normalized scores as UN's country classification as following:

1. Low (Z-score < 0.25)
2. Middle (0.25 < Z-score < 0.50)
3. High (0.50 < Z-score < 0.75)
4. Very High (Z-score > 0.75)

Overall agency classification for Departmental level

Departmental Agencies Grouped by Normalized Score

- Departmental agencies have high score in **Public Services** and **Secure and Efficient Infrastructure** in which these 2 pillars are the key elements to provide digital public services.
- Another high-score pillar is **Smart Back Office** which is to support digital public services.
- **Digital Capability** and **Digital Technologies Practices** are the Pillar with the two lowest score. Improvement in Digital Capabilities as one of the key enablers would help departmental agencies accomplish digitalization.
- Overall, departmental agencies have developed plan and action items alignment with the Digital Development Framework

Overall agency classification for Provincial level

Provincial Agencies Grouped by Normalized Score

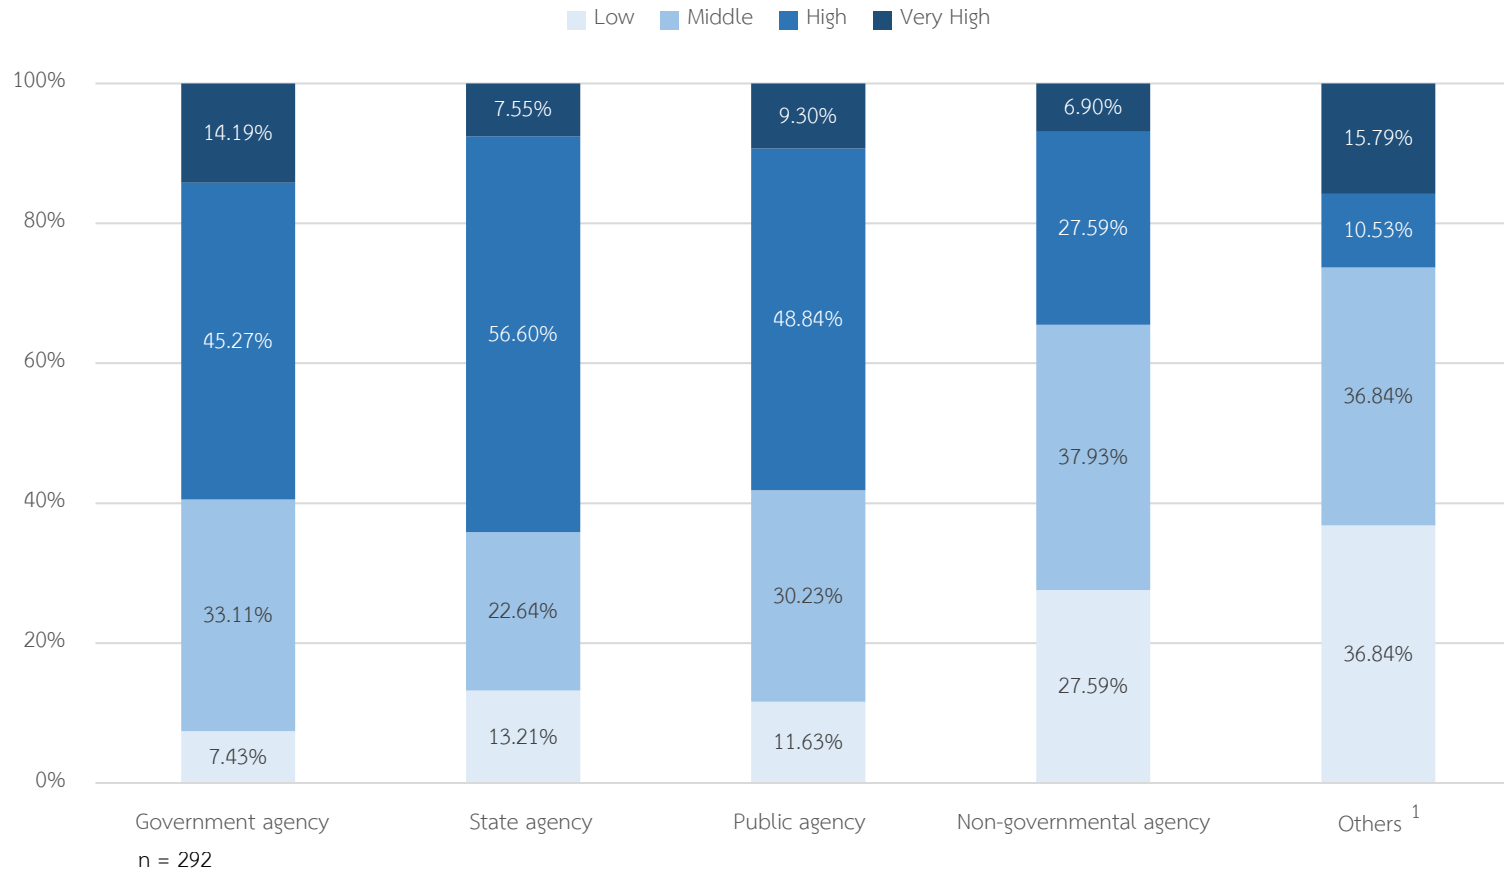

n = 1556

- Provincial agencies were outstanding in **Secure and Efficient Infrastructure** since they were reinforced by infrastructure from Departmental agencies.
- **Digital Capability** was the second most outstanding comparing with other pillars since this pillar was scored in limited area in which Digital leadership and Training Evaluation area were excluded.
- **Public Service** was mostly in middle range since they rely on service from Departmental agencies
- **Digital Technology Practice** was the least outstanding pillar since there were only few digitalization areas.
- Provincial agencies aligned their operation with Departmental agencies resulting in similar outstanding pillars

Overall agency classification by type of agency

Type of Agency Grouped by Normalized score

- Government agency, State agency and Public agency have similar score distribution by comparison
- Non-governmental agency has the least outstanding normalized score, comparing to other types of agency

1. For example, Student Loans, Health System Research Institute, Red Cross

Overall agency classification for Ministry level

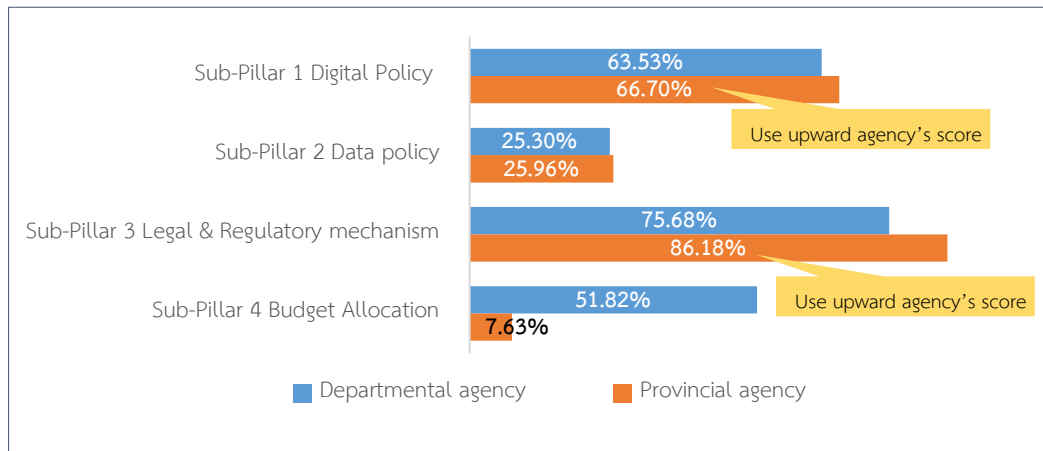

- Ministry of Interior, Ministry of Commerce and Ministry of Culture were the top three
- Ministry of Culture has the highest score in the High Group compared to other ministries. This reflected that the departments under the ministry had relatively good digital self-improvement, resulting in a high overall rating
- Meanwhile, Ministry of Defense and Ministry of Digital Economy and Society were still behind compared to others.

Fact Finding from Thailand Digital Government Readiness Survey

Pillar 1: Policies and Practices

Overall score		
	Highest Pillar	Lowest Pillar
Departmental level	Legal & Regulatory mechanism	Data policy
Provincial level	Legal & Regulatory mechanism	Budget allocation

Summary of Fact finding

Digital policy

- Most of the Departmental Agencies had good knowledge and understanding of the digital government development plan required by their own agencies and have a plan that was consistent with the digital government development plan.

Data policy

- Most Departmental Agencies had preliminary actions both data governance and open government data but there was still a lack of action to continuously improve or maintain their standards.
- Most agencies with disclosure Information was disclosed in basic file formats such as PDF, DOC, CSV, but there was a lack of disclosure in a format that can be used for in-depth analysis such as RDF files.

Legal & regulatory mechanism

- Most Departmental Agencies had no obstacle in term of Regulations that affect operations, However, the agencies with barriers were largely unresolved of Rules or regulations that hinder their operations.

Budget allocation

- Most agencies focused on budget allocation to maintain on equipment and systems, thus lacking budgets for system development or adopting new technology in the organization. This was one of the obstacles that may prevent the agency to drive the project.
- Most provincial agencies did not allocate funds for technology and digital operation. It showed the provincial agencies are not concerned with technology and digital as expected.

Pillar 1: Policies and Practices

1.1 Digital Policy

Departmental agencies (292 agencies)

Provincial agencies (1,556 agencies)

158 units have plan 108 units are developing plan 280 units have plan 835 units are developing plan

Plan Development for Digital Government

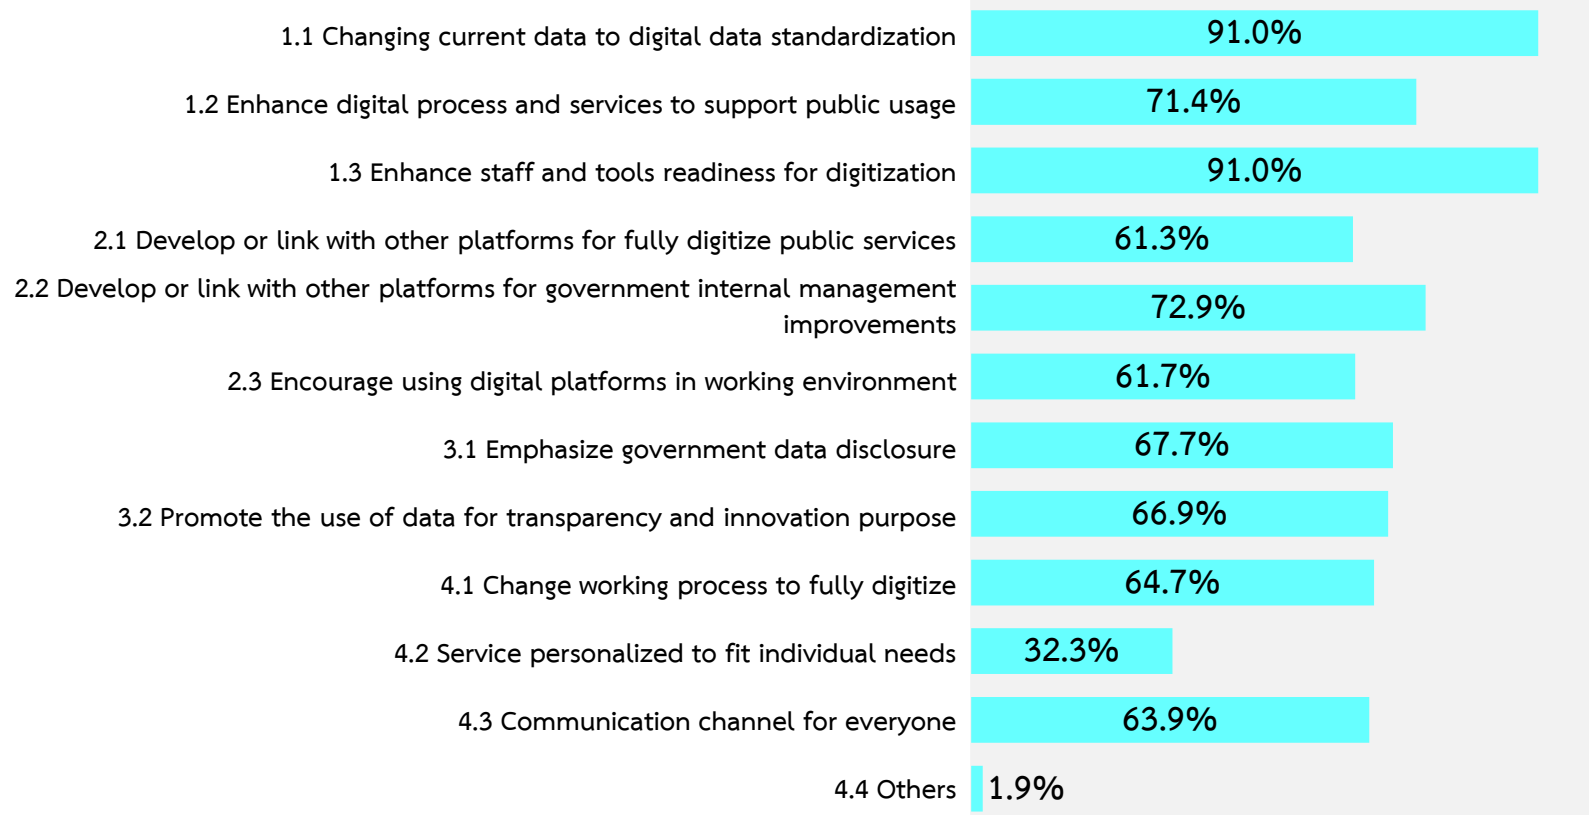

26 units without plan

91 units

201 units

(91 Respondents)

60 units

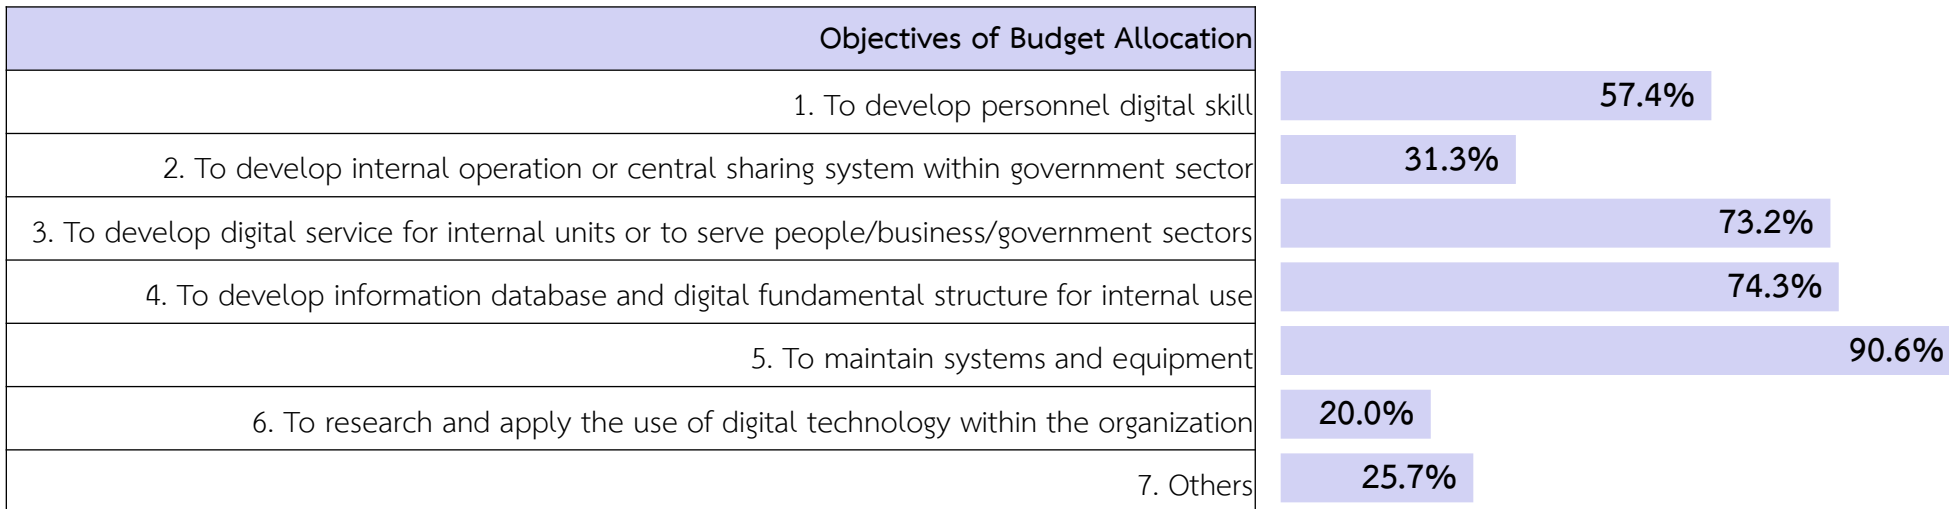

31 units

Amending, terminating or developing regulatory/legal considerations that will enhance digital development

Note : Provincial agencies are not asked

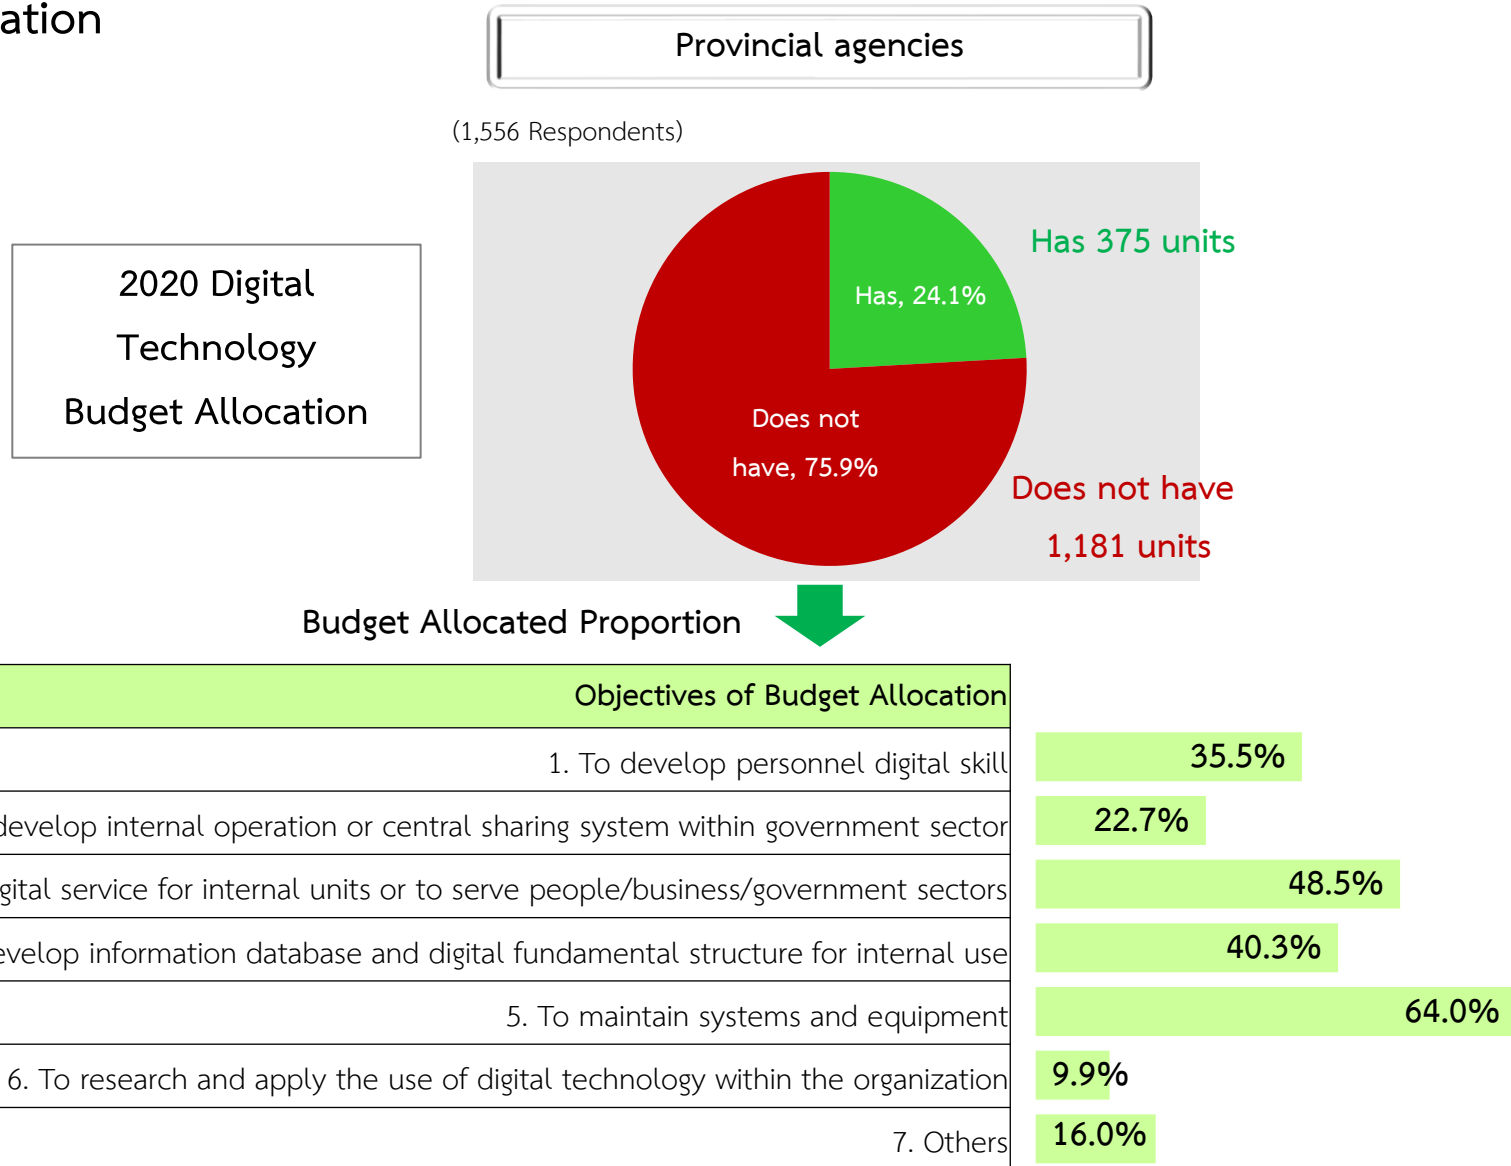

Pillar 1: Policies and Practices

1.5 Budget Allocation

Pillar 1: Policies and Practices

1.5 Budget Allocation

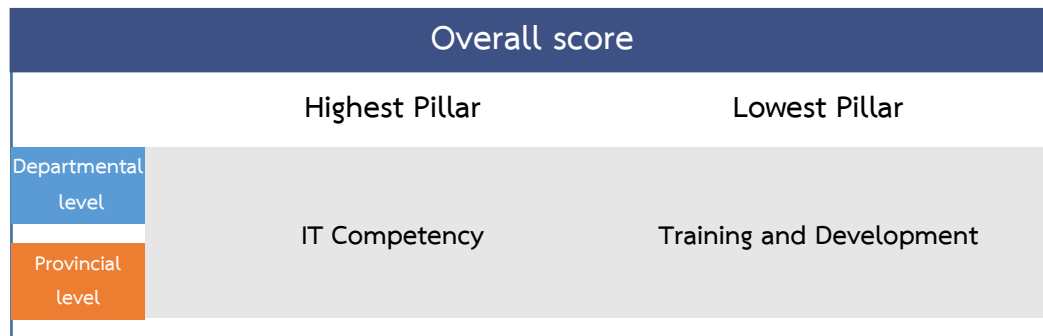

Pillar 2: Digital Capabilities

Overall Score for
Departmental agencies
n = 292

Overall Score for
Provincial agencies
n = 1,556

Summary of Fact finding

Digital leadership:

- Most departmental CIOs have not completed the training course for information technology executives which has the average working period as CIO is 1.9 years.
- CIO has pushed average of 3 projects to within their 2 years of services.
- The main reasons that the CIOs failed to push digital projects are lack of budget and insufficient personnel. This is consistent with fact found in budget allocation and IT human resource.

IT Human resource

- Most agencies have a proportion of a few technology personnel, compared with the total number of personnel
- In addition, only a small percentage of the technology personnel received a certificate of Digital profession.

Training and development

- The Departmental Agencies provide promotion and knowledge covers most topics which is necessity for the agencies.
- Most agencies did get the assessment after the training course.

IT competency

- Personnel skill assessment scores on certain topics does not correspond to the order of topics that the organization prioritizes in training and education such as cybersecurity.

Pillar 2: Digital Capabilities

2.1 IT Human Resource

	Departmental agencies (267 Respondents)	Provincial agencies (1,505 Respondents)
Total Personnel		
Total Personnel excluding contract and temporary employees	868,031 persons (291 units)	74,785 persons (1,505 units)
Total Technologists	17,718 persons (276 units)	3,740 persons (1,431 units)
Proportion of Technologist : Total Personnel	2.0%	5.0%
Average number of Technologist / organization	64 persons/unit	3 persons/unit

	Departmental agencies (286 Respondents)	Provincial agencies (1,510 Respondents)
Technologists excluding contract and temporary employees		
1) Specialized Information Technologist	Total IT personnel 11,918 persons 67.3% of Total Technologist	Total IT personnel 925 persons 24.7% of Total Technologist
2) Other field personnel assigned	Total 5,800 persons 32.7% of Total Technologist	Total 2,815 persons 75.3% of Total Technologist
IT Personnel with Digital Certificate (not expired)	Total 1,125 persons 9.4% of IT personnel	Total 72 persons 7.8% of IT personnel

Pillar 2: Digital Capabilities

2.2 Digital Leadership

CIO Position Holding

Departmental agencies

Average number of years holding CIO Position: 1.9 years
 Holding position less than 1 year: 31.6%

Provincial Governor's office

Average number of years holding CIO Position: 1.1 years
 Holding position less than 1 year: 38.2%

Trained Courses

Trained Courses

(292 Respondents)

Reasons for not pushing digital projects until success

Insufficient personnel	48.9%
Insufficient budget	41.5%
Focus on other projects	8.5%
Others e.g. the duration of holding position is not enough for pushing	41.5%

Success 576 projects from 197 units

(76 Respondents)

Reasons for not pushing digital projects until success

Insufficient personnel	62.5%
Insufficient budget	65.0%
Focus on other projects	17.5%
Others e.g. the duration of holding position is not enough for pushing	22.5%

Success 91 projects from 36 units

Pillar 2: Digital Capabilities

2.3 Training & Development

Note : Provincial agencies are not asked

Pillar 2: Digital Capabilities

2.4 IT competency

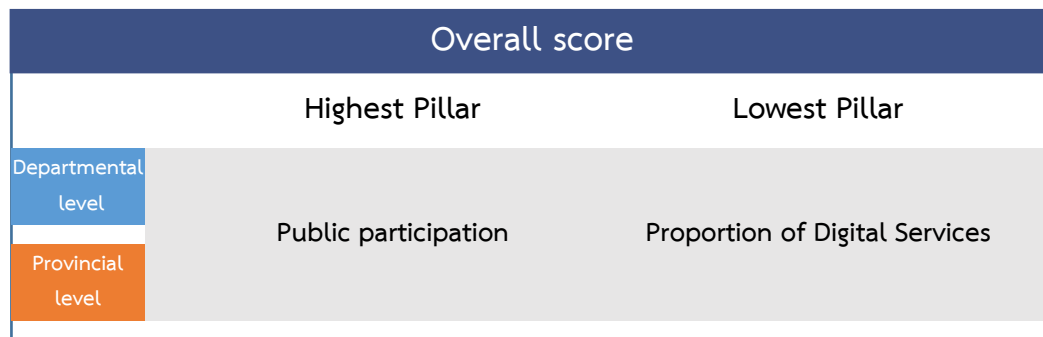

Pillar 3: Public Services

Overall Score for
Departmental agencies
n = 292

Overall Score for
Provincial agencies
n = 1,556

Summary of Fact findings

Proportion of digital service

- Most agencies get 0 points because they don't know the actual number of services provided.
- A very small percentage of the provincial agencies have their own developed services.
- Most agencies did not realize the need to connect their agency services to a centralized platform or developing a platform to connect with other agencies.

Public participation

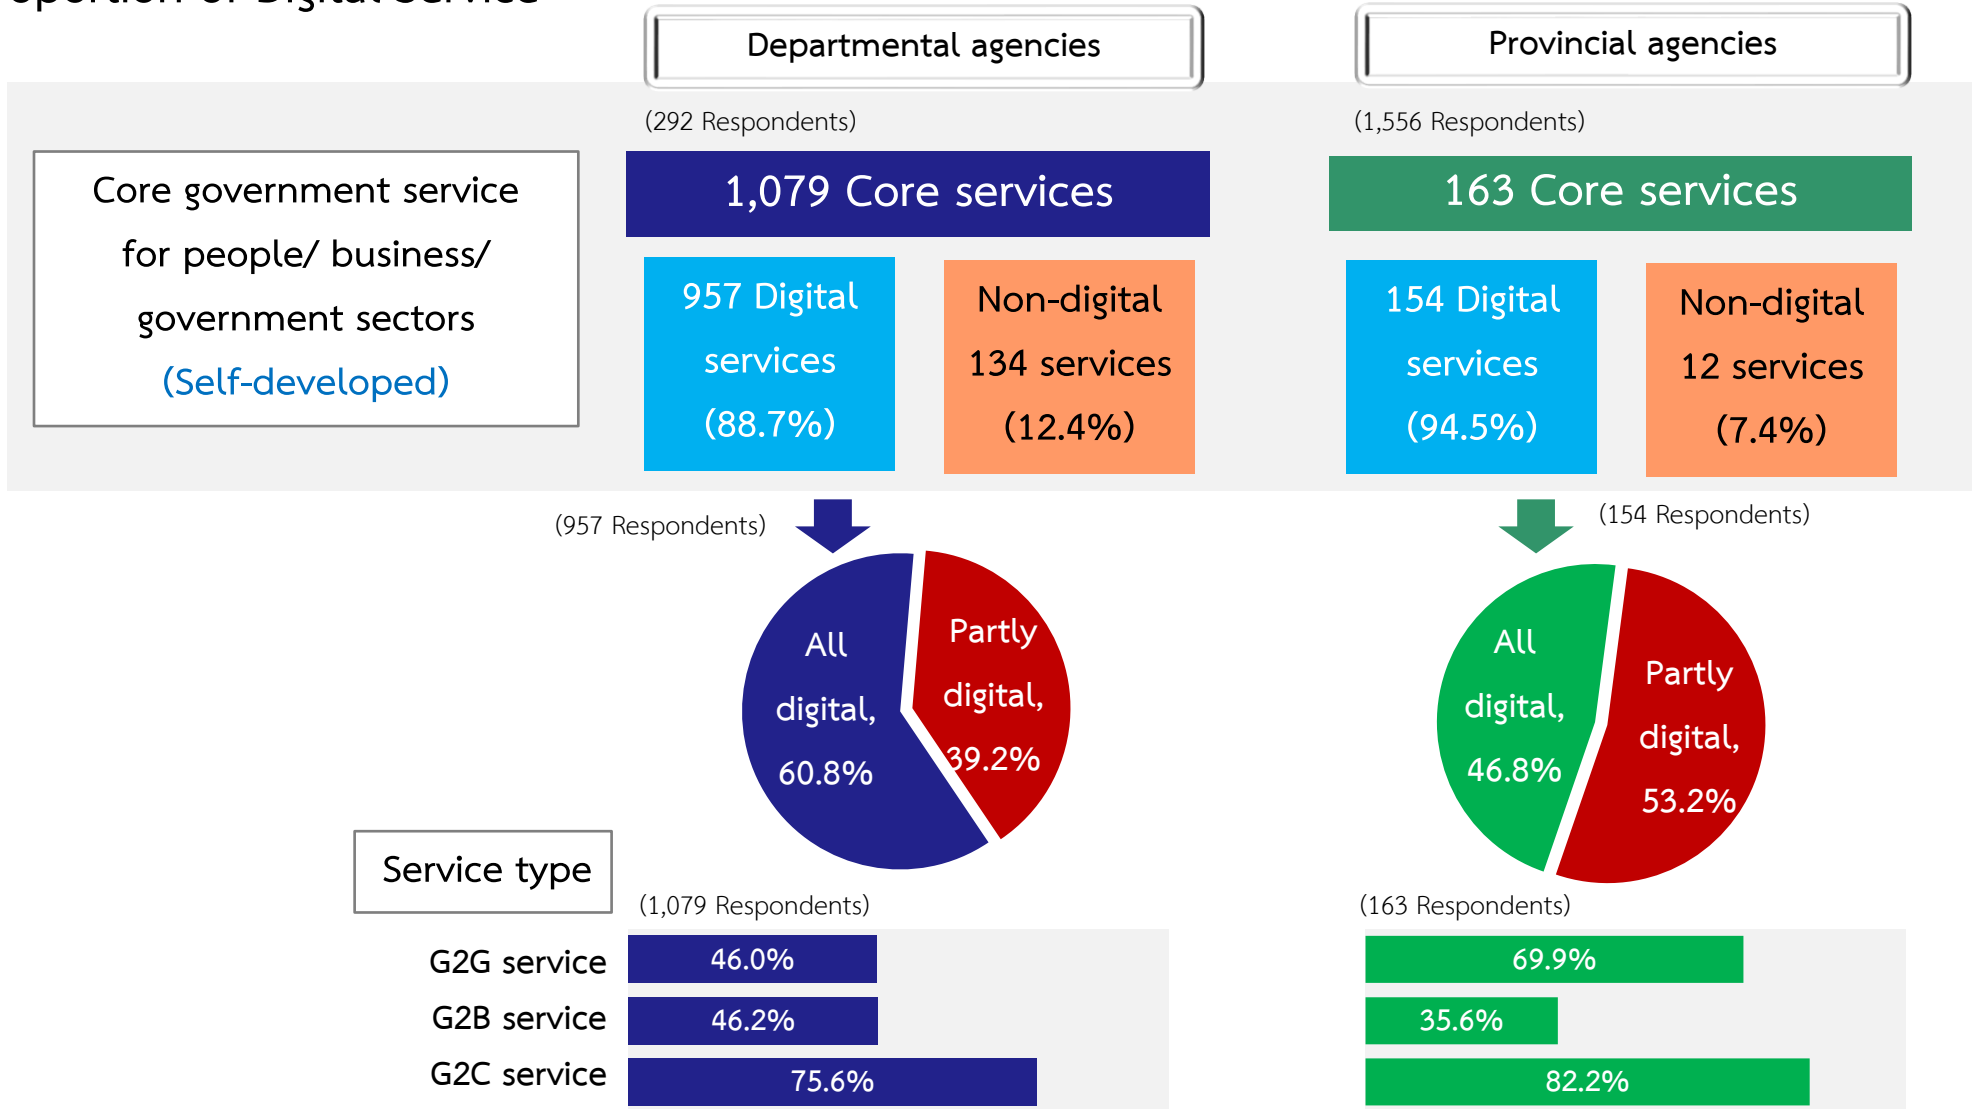

- Most departmental agencies can operate completely for this aspect. In terms of providing information and the opportunity for the public to express their opinions. For the opportunity for service recipients / other sectors to participate in decision-making of service development. The agency did well in allowing people to participate in voting related to the development of the agency's services but lacked in the involvement of the private sector / citizen to participate in their cooperative services.

Promote for using digital service

- Most agencies have driven the services including public relations in digital form, but still a lack of pushing services through a central platform such as the central website that is one stop service.

Overall Score for
Provincial agencies
n = 1,556

Summary of Fact findings

Integrated enterprise

- Most agencies do not use a central system or link their own systems with the central system of government agencies
- The provincial agencies has less internal system links than the departmental agencies because the system structure cannot be connected and there is still a lack of budget.

Administration

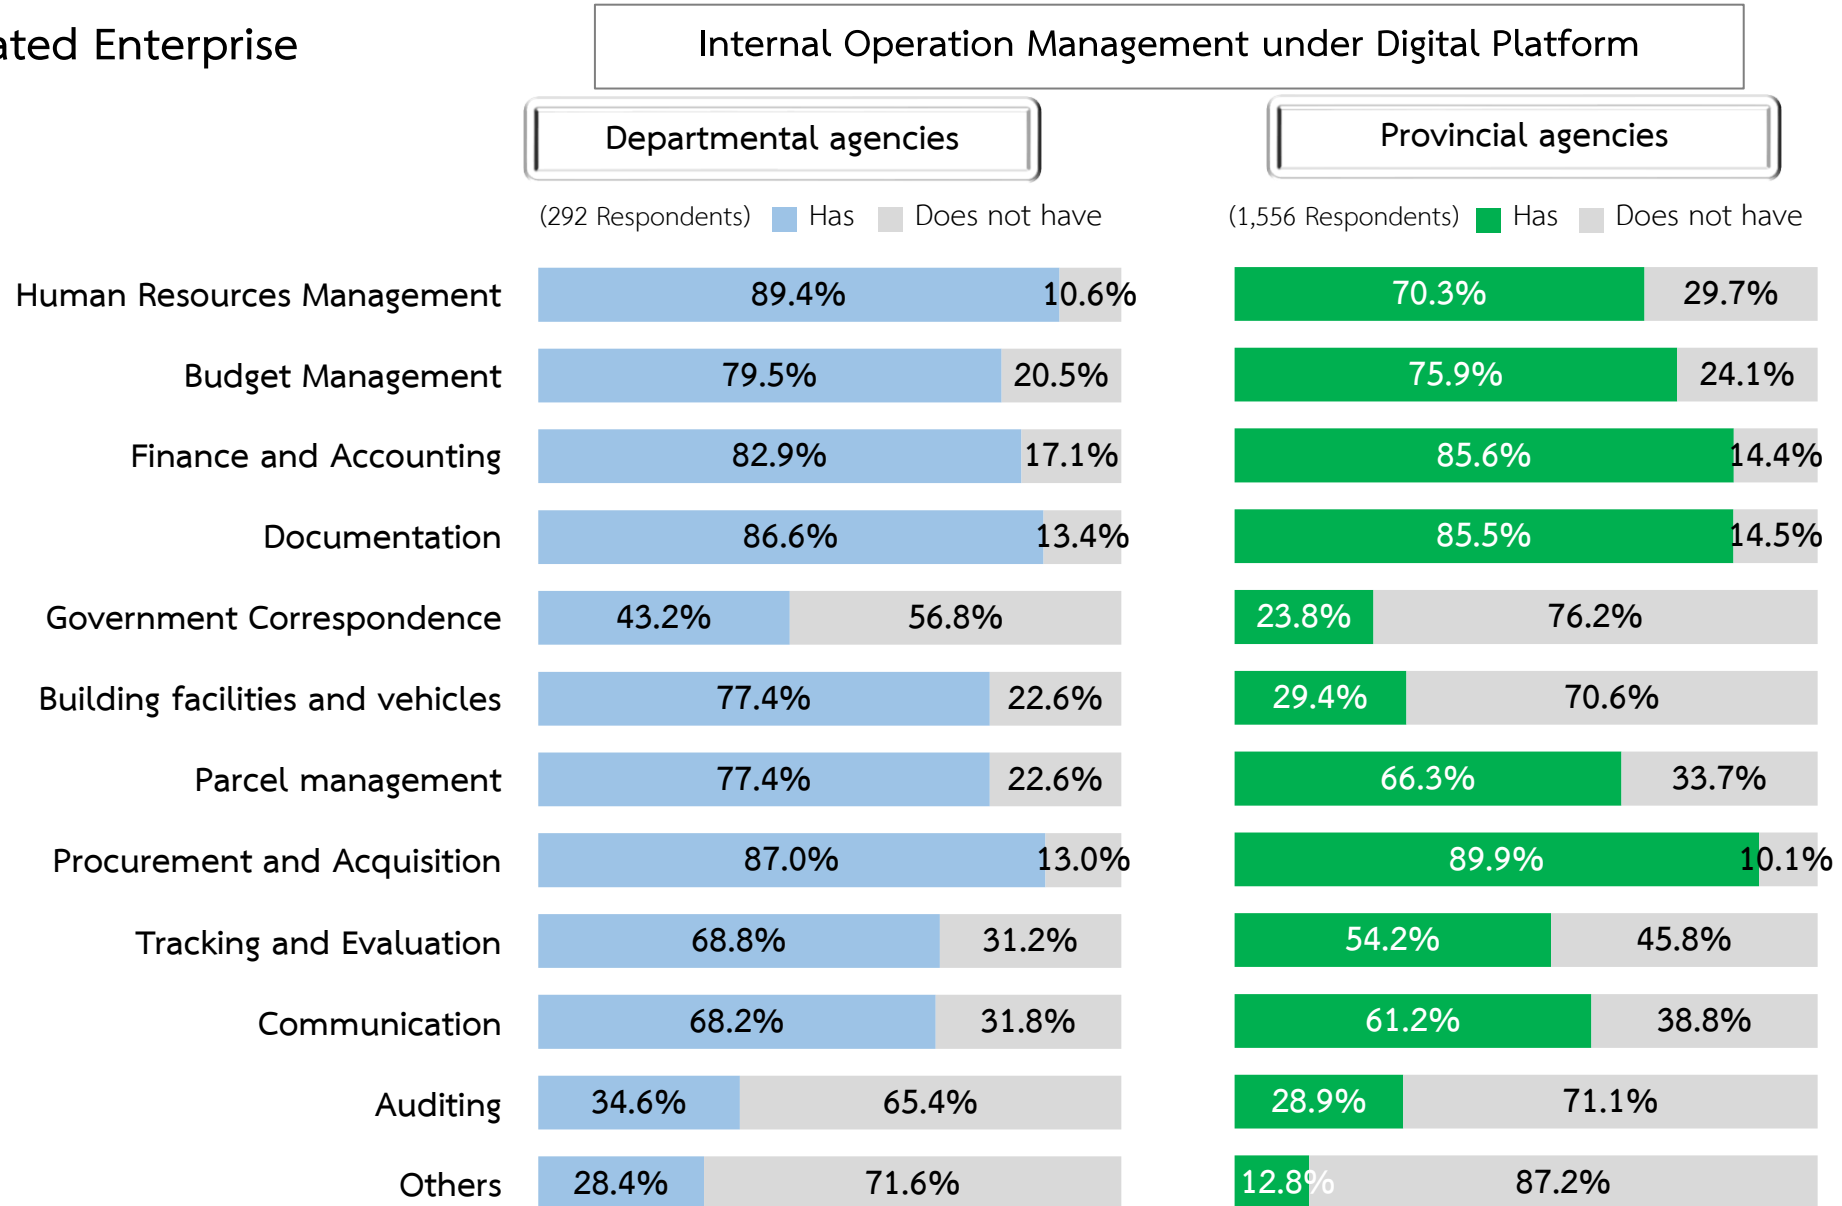

- Most departmental agencies have adopted technology included Process Automation to help reduce work processes, mainly in human resource management
- Most departmental agencies have reviewed their processes before adopting technology such as Process automation. However, it was found that most of the agencies did not review the process because the lack of budget and there is no supportive policy.
- Most agencies also use paper documents transmission because there is no clear policy to cancel the transmission of paper documents.
- Most departmental agencies have technology to support working at home, however, most provincial agencies do not have the technology to support working at home.

ด้าน Communication and collaboration

- Most agencies use communication and collaboration channels within the organization. They can use the channel suitable for the objectives.
- However, it was found that the agencies that did not use shared channels due to the lack of supportive policy or budget.

Overall Score for
Departmental agencies
n = 292

Overall Score for
Provincial agencies
n = 1,556

Summary of Fact finding

Reliable infrastructure

- Agencies at both departmental and provincial levels have insufficient hardware and software infrastructure. This is against the budget allocation of the departments at both levels which focused on the maintenance of equipment and systems.
- Most agencies are lack of central structure of the government to apply in the agency

Cyber security

- Most departmental agencies have implemented measures to maintain cybersecurity. In terms of the Integrity of the information in a small proportion.
- The cybersecurity standard has been implemented in accordance with the secure method of the Electronic Transactions Act. Most agencies will only start working if they have a clear policy released as a guideline for them to follow.

Data management

- The departmental agencies have a completed knowledge and understanding of the data storage, especially in terms of data updating which is updated in Real time format.
- However, the agency still need to develop in the field of data for in-depth analysis or analyze to forecast future results.
- Most agencies have been rated with the lowest score on Pillar was 6, which is reflected in the budget allocation of departmental and provincial agencies that minimum focus on research to adopt new technology on all topics

Recommendations on Policies and Practices (Pillar 1) (1/3)

Summary of Fact finding

Digital policy

- The Departmental Agency: Most of them have good knowledge and understanding of the digital government development plan required by their own agencies and have a plan that is consistent with the digital government development plan.

Data policy

- Most Departmental Agencies have preliminary actions both data governance and open government data but there is still a lack of action to continuously improve or maintain their standards.
- Most agencies with disclosure Information is disclosed in basic file formats such as PDF, DOC, CSV, but there is a lack of disclosure in a format that can be used for in-depth analysis such as RDF files.

Legal & regulatory mechanism

- Most Departmental Agencies have no obstacle in term of Regulations that affect operations, However, the agencies with barriers are largely unresolved of Rules or regulations that hinder their operations.

Budget allocation

- Most agencies focus on budget allocation to maintain on equipment and systems, thus lacking budgets for system development or adopting new technology in the organization. This is one of the obstacles that may prevent the agency to drive the project.
- Most provincial agencies do not allocate funds for technology and digital operation. It showed the provincial agencies are not concerned with technology and digital as expected.

Recommendations

1. Encourage agencies to study digital government direction in order to align plan with digital government direction. Most agencies plan are align with digital direction (54.1%). However, agencies should align their plan with digital government direction as following area
 - Enhance digital process and services to support public usage (71.4%)
 - Develop or link with other platforms for fully digitize public services (61.3%)
 - Develop or link with other platforms for government internal management improvements (72.9%)
 - Encourage using digital platforms in working environment (61.7%)
2. Promote and motivate agencies in implementing data governance in order to obtain accurate, complete, and up-to-date information on the acquisition and use of government agencies. effectively and safely. As currently there are only a small number (less than 18%) of departmental agencies that take action and announce the policy of Data governance

Recommendations on Policies and Practices (Pillar 1) (2/3)

Summary of Fact finding

Digital policy

- The Departmental Agency: Most of them have good knowledge and understanding of the digital government development plan required by their own agencies and have a plan that is consistent with the digital government development plan.

Data policy

- Most Departmental Agencies have preliminary actions both data governance and open government data but there is still a lack of action to continuously improve or maintain their standards.
- Most agencies with disclosure Information is disclosed in basic file formats such as PDF, DOC, CSV, but there is a lack of disclosure in a format that can be used for in-depth analysis such as RDF files.

Legal & regulatory mechanism

- Most Departmental Agencies have no obstacle in term of Regulations that affect operations, However, the agencies with barriers are largely unresolved of Rules or regulations that hinder their operations.

Budget allocation

- Most agencies focus on budget allocation to maintain on equipment and systems, thus lacking budgets for system development or adopting new technology in the organization. This is one of the obstacles that may prevent the agency to drive the project.
- Most provincial agencies do not allocate funds for technology and digital operation. It showed the provincial agencies are not concerned with technology and digital as expected.

Recommendations

3. Encourage agencies to disclose information through the open government data center (data.go.th) to facilitate people to access information through a single channel. Along with disclosing information in a format that allows people and businesses to further use or analyze in-depth analysis. Most of the still not disclose data in a format used for in-depth analysis included the files in the format of CSV, .ODS, .XML, .JSON, .KML, .SHP, .KMZ (62%) RDF (URIs,) (6.6%) and RDF (for Linked: Data) (9.6%)

4. Encourage agencies to complete the task of information sharing through the open government data center (data.go.th) as currently most agencies are aware and in progress of preparing (34.6). Most agencies should focus to complete on following areas.

- Area of Format and Quality of Data Disclosed (less than 36% of agencies have completed this area)
- Area of Value and Data Usage (less than 36% of agencies have completed this area)

Recommendations on Policies and Practices (Pillar 1) (3/3)

Summary of Fact finding

Digital policy

- The Departmental Agency: Most of them have good knowledge and understanding of the digital government development plan required by their own agencies and have a plan that is consistent with the digital government development plan.

Data policy

- Most Departmental Agencies have preliminary actions both data governance and open government data but there is still a lack of action to continuously improve or maintain their standards.
- Most agencies with disclosure Information is disclosed in basic file formats such as PDF, DOC, CSV, but there is a lack of disclosure in a format that can be used for in-depth analysis such as RDF files.

Legal & regulatory mechanism

- Most Departmental Agencies have no obstacle in term of Regulations that affect operations, However, the agencies with barriers are largely unresolved of Rules or regulations that hinder their operations.

Budget allocation

- Most agencies focus on budget allocation to maintain on equipment and systems, thus lacking budgets for system development or adopting new technology in the organization. This is one of the obstacles that may prevent the agency to drive the project.
- Most provincial agencies do not allocate funds for technology and digital operation. It showed the provincial agencies are not concerned with technology and digital as expected.

Recommendations

5. Encourage the agency to investigate problems and obstacles of government agencies and work together to find practical guidelines and amendments to facilitate digital development policies or plans. Currently, There are 31.2% of departmental agencies that have regulatory obstacle in the operations, and most of the obstacle is the revised regulations or regulations that hinder operations (65.9%).
6. Encourage agencies to study and consider guidelines for allocating sufficient technology budgets to drive the policy into actual practice and having sufficient budget for ongoing project implementation. Currently, Most departmental agencies allocate a budget for digital technology with the most budget on maintenance and maintenance of equipment and systems (90.6%), while budget requested for research and technology implementation is the smallest proportion (20%). These might be one of the obstacles for the organization to adopt new technology

Recommendations on Digital Capability (Pillar 2) (1/3)

Summary of Fact finding

Digital leadership:

- Most departmental CIOs have not completed the training course for information technology executives which has the average working period as CIO is 1.9 years.
- CIO has pushed average of 3 projects to within their 2 years of services.
- The main reasons that the CIOs failed to push digital projects are lack of budget and insufficient personnel. This is consistent with fact found in budget allocation and IT human resource.

IT Human resource

- Most agencies have a proportion of a few technology personnel, compared with the total number of personnel
- In addition, only a small percentage of the technology personnel received a certificate of Digital profession.

Training and development

- The Departmental Agencies provide promotion and knowledge covers most topics which is necessity for the agencies.
- Most agencies did get the assessment after the training course.

IT competency

- Personnel skill assessment scores on certain topics does not correspond to the order of topics that the organization prioritizes in training and education such as cybersecurity.

Recommendations

1. Encourage and support CIO to attend training courses for information technology administrators for gaining knowledge and competence to fully develop the organization and successfully drive digital initiatives. According to fact finding, There are only 31.2% of departmental CIOs that completed the training course for information technology executives.
2. As departmental CIOs has the average working period of 1.9 years. Therefore, government should support agencies to set up a knowledge sharing session for CIO to share ideas and views. This session will allow CIO to share their outstanding digital initiative in order to influence other agencies to adapt in driving their organization.
3. Recruit an appropriate number of technology personnel and develop the competency of personnel in the department to be ready for the rapid changes in technology in the future. The government should set a salary base and welfare for digital-technology personnel within government agencies to compete with the private sector. The incentives can motivate digital-technology personnel to work with government agencies. Currently, Most agencies have a small proportion of technology personnel compared to the total number of personnel (2 %). Moreover, most of the provincial-level technology personnel were staff recruit from other fields (75.3%)

Recommendations on Digital Capability (Pillar 2) (2/3)

Summary of Fact finding

Digital leadership:

- Most departmental CIOs have not completed the training course for information technology executives which has the average working period as CIO is 1.9 years.
- CIO has pushed average of 3 projects to within their 2 years of services.
- The main reasons that the CIOs failed to push digital projects are lack of budget and insufficient personnel. This is consistent with fact found in budget allocation and IT human resource.

IT Human resource

- Most agencies have a proportion of a few technology personnel, compared with the total number of personnel
- In addition, only a small percentage of the technology personnel received a certificate of Digital profession.

Training and development

- The Departmental Agencies provide promotion and knowledge covers most topics which is necessity for the agencies.
- Most agencies did get the assessment after the training course.

IT competency

- Personnel skill assessment scores on certain topics does not correspond to the order of topics that the organization prioritizes in training and education such as cybersecurity.

Recommendations

4. Encourage agencies to develop tasks especially for digital development which related operations and support the growing number of digital personnel that will be required to drive the success of the organization's digital initiatives. Agencies should focus on following areas.

- Area of Internal Integration and Service Design which is assessed with the lowest skill for provincial agencies (2.97 points)
- Area of Digital Leadership which is relatively low score compared to other area (3.46 points for departmental agencies and 3.02 points for provincial agencies)
- Area of Digital Transformation which is relatively low score compared to other area (3.46 points for departmental agencies and 3.07 points for provincial agencies)
- Area of Cyber Security which is assessed with the lowest skill for departmental agencies (3.36 points)

Recommendations on Digital Capability (Pillar 2) (3/3)

Summary of Fact finding

Digital leadership:

- Most departmental CIOs have not completed the training course for information technology executives which has the average working period as CIO is 1.9 years.
- CIO has pushed average of 3 projects to within their 2 years of services.
- The main reasons that the CIOs failed to push digital projects are lack of budget and insufficient personnel. This is consistent with fact found in budget allocation and IT human resource.

IT Human resource

- Most agencies have a proportion of a few technology personnel, compared with the total number of personnel
- In addition, only a small percentage of the technology personnel received a certificate of Digital profession.

Training and development

- The Departmental Agencies provide promotion and knowledge covers most topics which is necessity for the agencies.
- Most agencies did not get the assessment after the training course.

IT competency

- Personnel skill assessment scores on certain topics does not correspond to the order of topics that the organization prioritizes in training and education such as cybersecurity.

Recommendations

5. Develop training courses and structures for educating personnel to cover all aspects at the same standard to leverage the potential of technical personnel and apply knowledge to cover all skills that are beneficial to the organization. Most agencies should focus on following areas.

- Area of Internal Integration and Service Design which is the lowest area that departmental agencies have been promoted and educated (64.5%)
- Area of Programming language which is the lowest area that provincial agencies have been promoted and educated (35.8%)
- Area of IoT, Automation, Robotic, Cloud etc. which both departmental and provincial agency are less promoted compared to other areas (76.2% and 37.2% respectively)
- Area of Lean/Agile/Design thinking which both departmental and provincial agency are less promoted compared to other areas (6.5% and 39.1% respectively)

6. Encourage all departments to measure results after personnel training therefore the agencies can extend and develop training courses to be more efficient. According to the fact finding results, most agencies (more than 60%) did not has the assessment after the training course.

Recommendations on Public Service (Pillar 3) (1/2)

Summary of Fact finding

Proportion of digital service

- Most agencies get 0 points because they don't know the actual number of services provided.
- A very small percentage of the provincial agencies have their own developed services.
- Most agencies did not realize the need to connect their agency services to a centralized platform or developing a platform to connect with other agencies.

Public participation

- Most departmental agencies can operate completely for this aspect. In terms of providing information and the opportunity for the public to express their opinions. For the opportunity for service recipients / other sectors to participate in decision-making of service development. The agency did well in allowing people to participate in voting related to the development of the agency's services but lacked in the involvement of the private sector / citizen to participate in their cooperative services.

Promote for using digital service

- Most agencies have driven the services including public relations in digital form, but still a lack of pushing services through a central platform such as the central website that is one stop service.

Recommendations

1. Encourage agencies to integrate the systems including Digital ID/Digital Signature, e-Payment, e-Form and e-License/e-Certificated with government agencies' digital public service in order to provide one-stop-service within the same channel since over 50% of total agencies have not done yet.
2. Develop the public service on digital platform to encourage public services in order for cost optimization. 53.2% of total agencies were found that there were only few public services on digital platform.
3. Encourage government agencies to improve and comply with laws/regulations regarding the cancellation of the request for a hard copy of the ID card and house registration including photocopies of other documents to provide a fully digital service since 30.8% of total agencies still require ID card for proceeding transaction and over 49% of total agencies still require other copy of documents to proceed transaction.
4. Encourage agencies to realize the importance and understand the user needs in order to develop services to match the user needs as only 29.1% of total agencies offer the personalized services.

Recommendations on Public Service (Pillar 3) (2/2)

Summary of Fact finding

Proportion of digital service

- Most agencies get 0 points because they don't know the actual number of services provided.
- A very small percentage of the provincial agencies have their own developed services.
- Most agencies did not realize the need to connect their agency services to a centralized platform or developing a platform to connect with other agencies.

Public participation

- Most departmental agencies can operate completely for this aspect. In terms of providing information and the opportunity for the public to express their opinions. For the opportunity for service recipients / other sectors to participate in decision-making of service development. The agency did well in allowing people to participate in voting related to the development of the agency's services but lacked in the involvement of the private sector / citizen to participate in their cooperative services.

Promote for using digital service

- Most agencies have driven the services including public relations in digital form, but still a lack of pushing services through a central platform such as the central website that is one stop service.

Recommendations

5. 94.2% of total agencies already promoted the digital public services through digital channel. However, the promotion should be consecutively maintained to create awareness. User feedback should be monitored and analyzed to improve the public services to meet the user needs.
6. Encourage agencies to open for participation from public sector to gain insights on user needs as a guideline for further development as only 41.4% of total agencies already implemented.

Recommendations on Smart Back Office (Pillar 4) (1/2)

Summary of Fact finding

Integrated enterprise

- Most agencies do not use a central system or link their own systems with the central system of government agencies
- The provincial agencies has less internal system links than the departmental agencies because the system structure cannot be connected and there is still a lack of budget.

Administration

- Most departmental agencies have adopted technology included Process Automation to help reduce work processes, mainly in human resource management
- Most departmental agencies have reviewed their processes before adopting technology such as Process automation. However, it was found that most of the agencies did not review the process because the lack of budget and there is no supportive policy.
- Most agencies also use paper documents transmission because there is no clear policy to cancel the transmission of paper documents.
- Most departmental agencies have technology to support working at home, however, most provincial agencies do not have the technology to support working at home.

Communication and collaboration

- Most agencies use communication and collaboration channels within the organization. They can use the channel suitable for the objectives.
- However, it was found that the agencies that did not use shared channels due to the lack of supportive policy or budget.

Recommendations

1. Encourage and encourage agencies to adopt the central government system in monitoring, evaluation and communication as the full integration of information with the government agencies including government correspondence (which only 13.8% of total agencies adopted), Parcel management (which only 11.1% of total agencies adopted), and Tracking and Evaluation (which only 16.9% of total agencies adopted) to support fully system integration.
2. Encourage agencies to develop their own internal systems to be able for linkage with each other to achieve the integration of work within the department and build efficiency between systems since 22.8% of Departmental agencies and 54.5% of Provincial agencies have not implemented system integration.
3. Encourage agencies to develop the system to support system integration with external parties in order to cooperate and exchange useful data . 89.4% of total agencies were in need of system integration with external parties but only 55.2% already implemented.
4. Encourage agencies to develop the technology that supports remote working since 60.1% of total agencies still have not this technology.

Recommendations on Smart Back Office (Pillar 4) (2/2)

Summary of Fact finding

Integrated enterprise

- Most agencies do not use a central system or link their own systems with the central system of government agencies
- The provincial agencies has less internal system links than the departmental agencies because the system structure cannot be connected and there is still a lack of budget.

Administration

- Most departmental agencies have adopted technology included Process Automation to help reduce work processes, mainly in human resource management
- Most departmental agencies have reviewed their processes before adopting technology such as Process automation. However, it was found that most of the agencies did not review the process because the lack of budget and there is no supportive policy.
- Most agencies also use paper documents transmission because there is no clear policy to cancel the transmission of paper documents.
- Most departmental agencies have technology to support working at home, however, most provincial agencies do not have the technology to support working at home.

Communication and collaboration

- Most agencies use communication and collaboration channels within the organization. They can use the channel suitable for the objectives.
- However, it was found that the agencies that did not use shared channels due to the lack of supportive policy or budget.

Recommendations

5. Encourage organizations to adopt digital technology in Process Automation to minimize work processes, increase work speed and reduce redundancy of work processes across types of services especially in secretary work and automate test in which only 24.8% and 30.1% of total agencies already adopted.
6. Amend the regulations and issue the policy to cancel the paper document delivery to lean the work process and reduce the operating cost. From the survey, 95% of total agencies have worked with other agencies on digital platform. However, there was no obvious policy to omit the paper document causing over 90% of them still rely on paper document along with digital files.
7. Educate agencies about online collaboration and communication platform and encourage the appropriate adoption of each platform to increase work productivity. Although most of total agencies have already adopted those platforms, it is noted that over 90% still use Line as a communication channel for both internal and external communication which might cause the confidentiality issues.

Recommendations on Secure and Efficient Infrastructure (Pillar 5) (1/4)

Summary of Fact finding

Reliable infrastructure

- Agencies at both departmental and provincial levels have insufficient hardware and software infrastructure. This is against the budget allocation of the departments at both levels which focused on the maintenance of equipment and systems.
- Most agencies are lack of central structure of the government to apply in the agency

Cyber security

- Most departmental agencies have implemented measures to maintain cybersecurity. In terms of the Integrity of the information in a small proportion.
- The cybersecurity standard has been implemented in accordance with the secure method of the Electronic Transactions Act. Most agencies will only start working if they have a clear policy released as a guideline for them to follow.

Data management

- The departmental agencies have a completed knowledge and understanding of the data storage, especially in terms of data updating which is updated in Real time format.
- However, the agency still need to develop in the field of data for in-depth analysis or analyze to forecast future results.
- Most agencies have been rated with the lowest score on Pillar was 6, which is reflected in the budget allocation of departmental and provincial agencies that minimum focus on research to adopt new technology on all topics

Recommendations

1. Encourage all departments to prepare hardware and software infrastructure that is sufficient for use and is suitable for actual application to increase the efficiency of the works of agency. According to fact finding results, most departmental agencies have insufficient hardware and software infrastructure to operate. Department-level agencies have insufficient hardware infrastructure that reaches of 45.2 % and insufficient software reach of 39 %.
2. Encourage agencies to use infrastructure from the central government especially in the use of Government Data Center and Cloud service (GDCC) to increase the stability and security of data including economies of scale. According to fact finding results, There are only 18.8% of agencies who use infrastructure from the central government.
3. Support agencies to maintain cybersecurity in terms of integrity in order to increase the security of transactions and reduce the risk of counterfeiting by using hash function and digital signature. Currently, there are only 46.8% and 51.1% of departmental agencies that using hash and digital signature to secure transactions.

Recommendations on Secure and Efficient Infrastructure (Pillar 5) (2/4)

Summary of Fact finding

Reliable infrastructure

- Agencies at both departmental and provincial levels have insufficient hardware and software infrastructure. This is against the budget allocation of the departments at both levels which focused on the maintenance of equipment and systems.
- • Most agencies are lack of central structure of the government to apply in the agency

Cyber security

- Most departmental agencies have implemented measures to maintain cybersecurity. In terms of the Integrity of the information in a small proportion.
- The cybersecurity standard has been implemented in accordance with the secure method of the Electronic Transactions Act. Most agencies will only start working if they have a clear policy released as a guideline for them to follow.

Data management

- The departmental agencies have a completed knowledge and understanding of the data storage, especially in terms of data updating which is updated in Real time format.
- However, the agency still need to develop in the field of data for in-depth analysis or analyze to forecast future results.
- Most agencies have been rated with the lowest score on Pillar was 6, which is reflected in the budget allocation of departmental and provincial agencies that minimum focus on research to adopt new technology on all topics

Recommendations

4. Encourage agencies to develop the Disaster recovery plan: DR plan and Incident Management Process to secure data and to prevent data loss from any uncertainty circumstances. According to fact finding results, there are only 51.4% of departmental agencies that have Disaster recovery plan: DR plan and 47.8% have Incident Management Process
5. Build up understanding and promote the organization to manage the backup system in remote areas to increase the level of security and prevent data loss. Currently, Most of agencies has backup system but they placed the backup data at the same location where their organization is located (93.4%). In fact, backup data should be store at remote areas to prevent the data loss from any uncertainty such as fire or man-made disasters.

Recommendations on Secure and Efficient Infrastructure (Pillar 5) (3/4)

Summary of Fact finding

Reliable infrastructure

- Agencies at both departmental and provincial levels have insufficient hardware and software infrastructure. This is against the budget allocation of the departments at both levels which focused on the maintenance of equipment and systems.
- • Most agencies are lack of central structure of the government to apply in the agency

Cyber security

- Most departmental agencies have implemented measures to maintain cybersecurity. In terms of the Integrity of the information in a small proportion.
- The cybersecurity standard has been implemented in accordance with the secure method of the Electronic Transactions Act. Most agencies will only start working if they have a clear policy released as a guideline for them to follow.

Data management

- The departmental agencies have a completed knowledge and understanding of the data storage, especially in terms of data updating which is updated in Real time format.
- However, the agency still need to develop in the field of data for in-depth analysis or analyze to forecast future results.
- Most agencies have been rated with the lowest score on Pillar was 6, which is reflected in the budget allocation of departmental and provincial agencies that minimum focus on research to adopt new technology on all topics

Recommendations

6. Only 62.3% of total agencies complied with cyber security standard and most of them only complied with the minimum standard of Electronic Transactions Act. Therefore, the improvement on cyber security standard is needed to secure information technology by covering these following standards:

- ISO/IEC27001 – Only 45.6% of total agencies complied with this standard
- Web Application security Standard: WAS - Only 25.8% of total agencies complied with this standard
- Website Security Standard: WSS - Only 36.3% of total agencies complied with this standard

7. Encourage the real time update or daily update to increase the efficiency of data. 70.9% of Departmental agencies implemented real time update while only 34% of Provincial agencies implemented real time update.

Recommendations on Secure and Efficient Infrastructure (Pillar 5) (4/4)

Summary of Fact finding

Reliable infrastructure

- Agencies at both departmental and provincial levels have insufficient hardware and software infrastructure. This is against the budget allocation of the departments at both levels which focused on the maintenance of equipment and systems.
- • Most agencies are lack of central structure of the government to apply in the agency

Cyber security

- Most departmental agencies have implemented measures to maintain cybersecurity. In terms of the Integrity of the information in a small proportion.
- The cybersecurity standard has been implemented in accordance with the secure method of the Electronic Transactions Act. Most agencies will only start working if they have a clear policy released as a guideline for them to follow.

Data management

- The departmental agencies have a completed knowledge and understanding of the data storage, especially in terms of data updating which is updated in Real time format.
- However, the agency still need to develop in the field of data for in-depth analysis or analyze to forecast future results.
- Most agencies have been rated with the lowest score on Pillar was 6, which is reflected in the budget allocation of departmental and provincial agencies that minimum focus on research to adopt new technology on all topics

Recommendations

8. Develop the skills of personnel in data use for analysis, especially, Predictive Analytic and Diagnostic Analytic to increase the effectiveness and applicable results from analyzing data. Currently, Some of departmental agencies that using predictive analytic (50.8%) and diagnostic analytic (67%)

Recommendations on Digital Technological Practices (Pillar 6)

Summary of Fact finding

- Most of the agencies have the least score on this Pillar. This can be clearly support from as per the budget allocation where less amount of the budget has been allocated for technology development both departmental and provincial agencies.
- When considering the technologies implemented in each area, it is found that advanced technologies have not been implemented i.e. API, IoT, Big Data Analytics

Recommendations

1. Government should promote knowledge and understanding of modern technology such as Big Data, IoT, AI, Block Chain, etc., Therefore, the government agencies can select and apply modern digital technology in their management of the public sector and serving people appropriately; suit with the agency context to promote the leverage of government work and create new innovation. According to fact finding results, most of provincial agencies relatively applied the least technology for all areas (less than 30%)
2. Promote the using of technology in communication through mobile application channel which at is the core of Digital transformation. Because mobile application channel can reach to many users and create seamless customer experience to end user. According to fact finding results, only 24.5% of departmental agencies and 29.2% of provincial agencies have service on mobile application

Policy recommendations based on digital government readiness survey (1/2)

Topic	Recommendations
Budget allocation	<ol style="list-style-type: none"><li data-bbox="741 382 2354 718">1. The government should promote or cooperate with the private sector for system development to provide the fundamental software services to support the internal use in order to increase the efficiency of operations within agencies, to reduce costs of system maintenance, as well as to reduce the costs of software license within agencies. The findings from the survey reveals that most agencies are still lacking basic software infrastructure, especially the Microsoft Office (Word, Excel, PowerPoint) which more than 80.7% of agencies are still lacking even though they are the most fundamental software required for all agencies. Government considered for Improve the budget approval system of the government has paced up to the actual practice in various digital projects of government agencies<li data-bbox="741 739 2354 868">2. Government should focus on developing 'IT infrastructure as a service' to reduce the needs for outsourcing services from private sector. However, this should be limited to core infrastructure only, each agency can further develop their own systems on infrastructure according to their specific needs.<li data-bbox="741 889 2354 1125">3. Government should assign an agency to be responsible for the research and the development of technology to be used specifically for the government agencies. This is essential since many of the agencies are still lack of the budget and personnel to research and develop new technology on their own. The survey has found that more than 90.6% of all agencies allocate most of their budget on the maintenance of their IT systems and equipment, while budget allocated on the research and development of new technology has the least priority of only 20% of overall budget.<li data-bbox="741 1146 2354 1218">4. Government should review the budget approval procedures to be flexible for adopting an up-to-date technology at the right time.

Policy recommendations based on digital government readiness survey (2/2)

People development	<ol style="list-style-type: none"><li data-bbox="741 434 2356 619">1. Government should establish a pooling resource system with a pool of key personnel who owns a desirable skills for digital development. This will solve the problem of lack of tech personnel among all government agencies which resulted in the need to acquire personnel with no technology background to do the work, especially in the provincial agencies with the percentage as high as 75.3%.<li data-bbox="741 686 2356 772">2. The government should encourage agencies throughout the nation to develop Digital Transformation Roadmap. Therefore, the agencies can plan people development under their own authority effectively.<li data-bbox="741 839 2356 925">3. All government agencies should focus more on front office skill development since back office operation will be gradually eliminated.

Extended recommendations based on digital government readiness survey (1/4)

Topic	Recommendations
Pillars 1: Policies and Practices	<ol style="list-style-type: none"><li data-bbox="741 382 2354 515">1. Government should define the success indicators for digital maturity development in terms of numeric values such as transaction period, service-level agreement (SLA) etc. Because the post training evaluation cannot obviously illustrate the development. Numeric indicators can be a tangible measurement to track agencies' performance.<li data-bbox="741 586 2354 819">2. Government should provide incentives for agencies to accelerate the digital maturity development through building awareness of outstanding agencies through public media. It should also promote a role-model agency for each digital topic that is needed to be driven. The outstanding case studies or performance should be published through central government. Top-down encouragement from central government is more powerful to express the intention to drive the digital government.<li data-bbox="741 891 2354 1023">3. The government should develop a data center for data exchange and digital registrations among government agencies. Some agencies still require ID card or other copies of document to proceed public. Data center will centralize these personal information to share across agencies and reduce redundant document requirement.

Extended recommendations based on digital government readiness survey (2/4)

Topic	Recommendations
Pillars 2: Digital Capability	<ol style="list-style-type: none">1. Establish required digital core skillset and courses for government agencies. They may create their own course content or international course standards that are aligned with the required skill. According to fact finding results, most of agencies recognize the need of the organization to enhance digital skills in all aspects. However, the training and education are separately developed by each agency and may not fully meet digital government standard. Therefore, governments should define guideline for required skill set and standardized training course to set up standard but allow each agencies to operate their own training course according to their specific skills needed.
Pillars 3: Public Service	<ol style="list-style-type: none">1. Government should set up the central agency to oversee digital infrastructure development for core system such as e-payment for government services, e-personal data, central platform for public services etc. This agency should take role in set up a system infrastructure guideline for these core systems which is widely used across many agencies. Currently, more than a half of total agencies did not realize the importance of core system integration.2. Central digital agency should motivate the key success indicators for customer experience development to shape the service development direction align with users needs and customer centricity.
Pillars 5: Secure and Efficient Infrastructure	<ol style="list-style-type: none">1. The government should establish measures or systems to secure access to the digital services of government agencies to create credibility. Government should set up minimum requirement for agencies to comply with cyber security standard in order to deal with unexpected cyber crime in the future. According to fact finding results, most of agencies has different level of cybersecurity implementation even under the same areas (CIA). Therefore, if there are explicit measurement from government, this will drive each agencies to strengthen cyber security standard.
